

Pylaunch API

Pylaunch API is version 0.1 so it is not done but, soon you will be able to launch your own Python Programs with Pylaunch!

The Definitions

`Idleorcommandline()` = Returns if idle or not, returns True if idle and False if command line

e.x:

```
ioc = idleorcommandline()

if ioc == True:

    print('Running in Python IDLE)

else:

    print('Running in Command line')
```

`osname()` = Returns os name (But, only the ones that PyLaunch works with)

e.x:

```
elif os == ("nt"):
```

```
print("OS name nt")
```

```
time.sleep(2)
```

```
elif os == ("dos"):
```

```
    print("OS name dos")
```

```
    time.sleep(2)
```

```
elif os == ("ce"):
```

```
    print("OS name ce")
```

```
    time.sleep(2)
```

To Include PyLaunch Use:

```
from PyLaunch1000 import *
```
